

DivineMind.AI

DivineMind.AI FlexCo, based in Vienna, develops an operating system for small and medium-sized businesses. Accounting, email, customer management, calendar, tasks, inventory, point of sale, time tracking, and industry-specific functions run in one system instead of five separate programs. AIRIS, an AI employee, works within this system, communicating via chat or voice. For each area, the system defines what AIRIS can handle autonomously and what requires human approval; emails to customers and payments are approved by a person. If a business lacks a process, it tells AIRIS: an AI programs and tests the extension, and a human approves it. Data is stored in the EU, and the interface is available in 30 languages.

WHAT MAKES DIVINEMIND DIFFERENT

- **One button for autonomy.** For each area, the business sets the level: only suggest, submit for approval, or handle directly. Emails to customers and payments require human approval; every AI action is logged.
- **Extension via message.** Customers tell AIRIS what they are missing. If it can be solved without programming, AIRIS sets up a workflow that the owner can activate with one click. Otherwise, AIRIS records the request, and DivineMind turns it into a development order: An AI programs the extension, tests it in a demo account, and creates an explanation video. It goes live only after human approval. The first order was ready for approval that same morning.
- **Errors, that report themselves.** Detected errors are automatically analyzed, fixed, and tested. Since October 21, 2026, there have been 24 errors; every change is logged and traceable.
- **AIRIS Messenger. Private from Europe.** End-to-end encrypted, ad-free, AI on-demand only. Currently in beta, App Store and Google Play to follow.

THE STORY

- **around 2020** · Invoices via code instead of by hand
- **Heuriger in Vienna** · One cash register, little else
- **B2B Field Service** · The same problems elsewhere
- **August 2023** · The Idea
- **November 2023** · He programs himself
- **2024** · The project becomes a company
- **January 2025** · Why am I still managing this myself?
- **October 2026** · Software expands via message

"At some point, I had all the tools I needed for my business. But I still had to operate them myself. So I wanted an AI that I could simply tell: Please do this for me."

Benjamin Dosenciuc, CEO

AT A GLANCE

Company	DivineMind.AI FlexCo, Vienna
Company since	2024
Idea	August 2023
CEO	Benjamin Dosenciuc
Funding	Self-funded
Languages	30
Industries	11
Data	EU (Frankfurt, Berlin)
Markets	EU, UK, USA, Canada

CEO

In 2023, Benjamin Dosenciuc had the idea for DivineMind.AI and began programming the software himself. Today, as CEO of DivineMind.AI FlexCo in Vienna, he leads product and strategy. Previously, he automated invoices for his company Abo-drive, ran a Viennese wine tavern, and worked in B2B field sales.
